How to comply with BS 7593:2019 A Quick Guide

Follow the six steps of the ADEY Best Practice approach using our proven products to meet the new British Standard (BS 7593:2019)

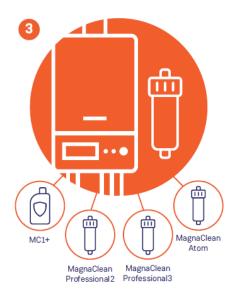

As even brand new systems may have debris they all should be cleaned with chemicals formulated for heating or cooling systems.

A flush should be completed on new systems and when repairing existing ones. Magnetite capture and radiator agitation can improve speed and effectiveness.

An inline filter should be fitted, after completing the clean, on all systems.

Chemical inhibitors should be added and antifreeze should be used if the system is exposed to freezing temperatures. Biocides are important for systems running at below 60°C. A water test is required to test the level of inhibitor and cleanliness of the system every year.

Inhibitors should be re-dosed every 5 years. A full lab test can be conducted to ensure ongoing protection.

kit

	MagnaClean Atom	MagnaClean Micro2	MagnaClean Pro2	MagnaClean Pro3 Sense	MagnaClean TwinTech
Key benefits	Super compact, space saving filter Effective magnetic filtration Suitable for the tightest installation spaces Filter can be switched to bypass for easy servicing	A compact magnetic filter ideal for smaller central heating systems Double action filter delivers exceptional protection against damaging magnetic and non-magnetic debris	Market leading magnetic filter The unique design maximises first pass capture Installation can be completed in just two minutes	The UK's first smart filter Monitor your customers heating systems remotely and detect dangerous levels of sludge before it causes boiler breakdown Reduce time on admin with automatic warranty registration	Ideal for use with underfloor heating systems. High performance magnet for damaging magnetite. Fine wire gauze for non-magnetic and biological films.
Warranty	2 years	10 years	10 years	10 years (2 year electronic warranty)	2 years

All magnetic filters offer Market leading brand

Immediate ongoing central heating protection

6% annual saving on heating bills

Reduced carbon emissions

Extends the life of the central heating system

Use as part of the ADEY Best Practice approach to maximise central heating protection
